# Keep It Cool With Shorr's Cold-Chain Solutions

Shorr Packaging offers a wide variety of cold-chain materials and solutions for shipping all your temperature-sensitive products. Whether you're looking for an eco-friendly material or a value-priced product, we offer a full array of choices. From containers to mailers, coolants to indicators, and everything in between; we've got you covered. Our packaging experts will work with you to select the materials and design the solutions that meet your goals, protect your products, and innovate your packaging.

## Gel Packs & Ice Bricks

Gel packs and bricks are food-grade and safe to ship, keeping perishables and temperature-sensitive products in “as shipped” condition of ambient or frozen in a variety of sizes. They are reusable and moldable when thawed. Options are also available in eco-friendly, drain-safe options with recyclable film. Customization is also available for branding and size to meet client needs.

## Flexible & Rigid Box Liners

Box liners keep your products cool or frozen, resist odor and leakage, and provide the most customizable options for branding and sizes. They are available in paper fiber, PET, EPS, cotton, or foil and can be used with gels packs, ice bricks, and dry ice. These can be used with or without additional thermal barrier bags. Thermal box liners can be shipped flat to save storage space over standard EPS coolers or assembled in cartons if you choose. These are ideal for a wide range of products.

## Shippers

Shipper coolers are a reliable and economical choice for shipping all types of perishable materials. Available in EPS (expanded polystyrene) or a variety of eco-friendly foams that are engineered to create an insulating barrier within a corrugated container. Both options offer 72-hours of thermal protection and are great for most food and pharmaceutical applications.

Our eco-friendly foam options are biodegradable and 100% curbside recyclable. The EPS coolers are recyclable through EPS recycling stations.

## Insulated Mailers

Insulated mailers keep products protected and cold. They are available in thermal foil, cotton or eco-friendly foam-lined materials; they save storage and shipping space over traditional EPS shippers. Thermal mailers can be used with or without gel packs and are ideal for 24-48 hour shipments of medical and food products.

## Insulated Packaging Systems

Pallet-sized, insulated packaging systems are durable and great for protecting bulk loads of refrigerated and frozen products. These products provide multi-day performance and are independently ISTA certified with laboratory testing. They are ideal for 3PL and Cold-Chain shipments with LTL freight trucking, rail, or overseas deliveries. Available in single or multi-trip reusable options.

## Temperature Indicators

These devices are designed to help shippers identify and correct gaps in their cold chain by alerting them or clients to tamper or exposure to unacceptable conditions. Indicators are available in single or multi-use, time-temperature, humidity, and all-inclusive options.

## Contract Packaging

In addition to our cold-chain materials, we also offer a contract packaging solution. Our kitting and assembly experts can help you reduce labor expenses, workplace hazards or other risks, and free up storage and warehouse space in your facility. Our capabilities include:

- Custom Packaging & Design
- Cooler Kitting / Assembly
- Freezer Warehousing
- Order Fulfillment
- Logistics /Managed Transportation
- On-Site Staffing

We can implement a custom solution that works for you so you can focus on what you do best.

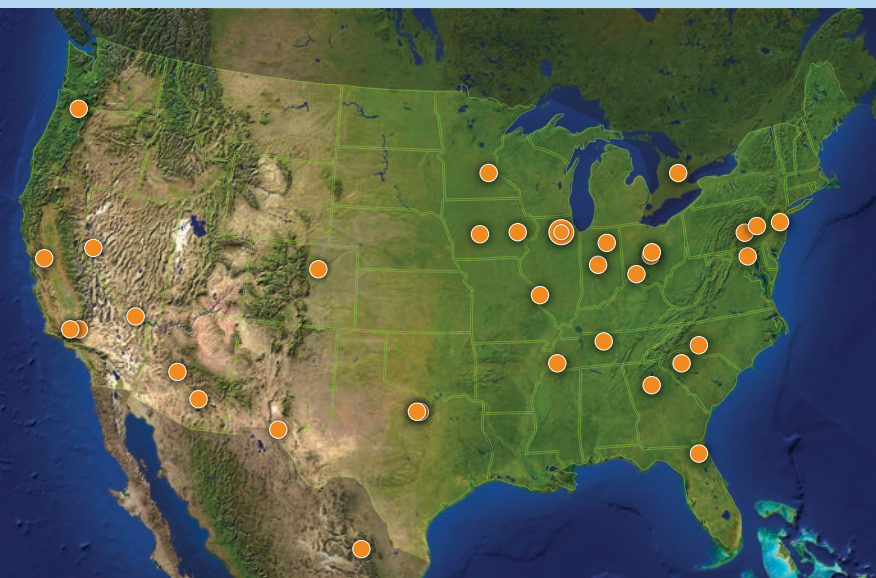

Our comprehensive programs, integrated solutions, and packaging experts will transform your packaging operation by holistically addressing all areas of packaging—from design through inventory and life-cycle management.
